EXAMINER'S STATEMENT OF REASONS OF ALLOWANCE

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant's invention is drawn to utilize of in-band signaling to facilitate modem on hold in order to provide a user-transparent modem-on-hold communications between a local modem and a digital terminal equipment more efficiently and without interrupt of data flow between the local modem and a remote modem (i.e., a local modem capable of receiving an alert signal from central office to indicate an incoming call from a third party while is in communication with a remote modem, collecting caller identification received from the central office and informing a host of the call waiting event, wherein the local modem is operable to transmit the caller identification to the host using an in-band caller identification message in response to an in-band caller identification request from the host, and to receive an in-band answer request from the host to answer the incoming call).

Applicant's independent claim 8 recites, *inter alia*, a local-modem in communication with a host with a structure as defined in the specification (page 10-21) including a processor controlling a host receiver, a host transmitter, a modem receiver and a modem transmitter, the processor having an in-band controller, wherein said processor acknowledges said alter signal, said modem transmitter notifies said remote modem of a modem-on-hold state, said processor collects caller identification received by said modem receiver from said central office, said processor informs said host of said alert signal, said in-band controller receives an in-band caller identification request via said host receiver from said host, said in-band controller transmits said

caller identification to said host using an in-band caller identification message via said host transmitter, and said in-band controller receives an in-band answer request via said host receiver from said host to answer said incoming call, wherein said in-band caller identification request, said in-band caller identification message and said in-band answer request are embedded in a data stream being communicated between said local modem and said host. Applicant's independent claim 8 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Applicant's independent method claims 1 and 14 each recite, *inter alia*, receiving an in-band caller identification request from said host for said caller identification, transmitting said caller identification to said host using an in-band caller identification message, and receiving an in-band answer request from said host to answer said incoming call, wherein said in-band caller identification request, said in-band caller identification message and said in-band answer request are embedded in a data stream being communicated between said local modem and said host. These steps, in combination of the remaining steps, are neither taught nor suggested by the prior art.

Accordingly, these claims are allowed for these reasons and for the reasons recited by Applicant in Amendments filed 1/8/2005 and 7/12/2005.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
